

SAP Developer News

PUBLIC Podcast SAP Developer News - Transcription **January 2nd, 2025**

[Intro] This is the SAP Developer News for January 2, 2025. Happy New Year!

[Antonio] Hello, SAP Developers! 2024 was a very exciting year in the integration space. Proof of that is that there have been a total of 282 updates in SAP Integration Suite this year alone. There are two new capabilities, the Dataspace and EventMesh capabilities. The integration architecture guide was recently updated. Edge Integration Cell is now supported in more platforms. for example GKE and Red Hat OpenShift. API Business Hub is now known as the developer hub. In cloud integration, we now have design guidelines checks in iFloos. The pipeline lab concept was introduced and it has significantly evolved. Lots of new adapters available for SAP cloud integration and the migration tooling is now pattern -based instead of template base. In the event-driven space, EventMesh is now part of the SAP integration suite. The SAP Event Broker is now known as SAP Cloud Application Event Hub and we can configure their connectivity with cloud integration. We can now leverage the SAP Application Interface framework to send events to advance event mesh and many more updates.

Personally, I had the opportunity to meet many SAP developers, customers and partners at different in-person events, be it as part of our CodeJams, networking events, SAP Inside Tracks, or Take It On Tour. Definitely the highlight for me there was the CodeJam road show we did with Josh in Latin America. Seuro, organized another in 2025. Virtually, interacting with many via the SAP community. I hosted a Code Challenge focusing on cloud events. I did a few live streams, but not as many as I would like. Also, being part of SAP TechEd Virtual, and also, organizing the Devtoberfest 2024 integration track. Last, presentedly, not least, I got to work on a unique project, which was publishing an SAP Press eBite, focusing on developing event -driven integrations with SAPBTP, published on the 14th of November. What can I say? It was an eventful year, but I'm already looking forward to 2025 and sharing some of the new cool projects we're working on. Ciao.

[Josh] Hey everybody. It's Mr. Bluebeard, Josh Bentley, and I wanted to reach out to you at the end of this holiday season to say, I am not traveling right now. I did a lot of traveling this year, and I was super appreciative of it. And that's really the highlight of what I wanted to say while I'm actually making my bathroom a proper color, blue. So see what's going on there? And we're going to tile the bottom. So it's going to look nice when it's done. That's what I'm doing at the end of the year. Taking a few days off, relaxing, recharging, and reflecting. So the 3Rs, Recharging, Reflecting. I just made that up. I basically am going to sit here and paint, and when I get a little frustrated to have a project's going, I'm going to remember how lucky I am to get to be a developer advocate for SAP, talk about thing like SAP build, and when I'm not building tile or building something in my house, I'm building apps. And I got to do that with Antonio in Latin America, my first time down there. So we got to go to great four different Code Jam locations. We did eight co-GEMs down there and a few stomptish. And then I got to go to Europe, of course, to do tech ed. And then we did Tech Ed on tour in Florida and then jump down to Australia. Also my first time down there. So amazing time getting to be a part of this SAP community. And what's really cool is that I don't care really where the geography is, where it is in the northern hemisphere, the southern, eastern, west. It doesn't matter because it's all about the people. It's about you guys. I got pain on my fingers. It's about you guys, the SAP community. And it doesn't matter where we are, as long as we're together and we're interacting and I can talk to you about code. You can talk to me about code or just what's going on in your life. It's really nice to be a part of this community. So I'm now going to spend the next four hours naming each and every one of you. I've met this. No, just kidding. This is a short two-minute video. I'm going to get back to working here in the house and take off a lot of days the rest of the year. I hope you all have a great holiday season. And I can't wait to see you next year. Bye.

[Sheena] Hello everyone. As 2024 comes to a close, I want to celebrate some of the major milestones I achieved this year. My journey as a developer advocate in 2024 was very exciting. I kicked off the year with an ABAP Cloud CodeJam in Mumbai, followed by several code jams across India alongside my colleague, Shilpa. This year brought me closer to the community through several events like SAP Insight Track, the Abap Developer Challenge, the SAP TechByte series and Devtoberfest. In SAPPTICPi series, we have covered all that you need to know about ABAP data services. In September, September, I had the privilege of organizing the ABAP track for one of the most awaited events, Devtoberfest. It featured many great sessions led by the experts and the response from the community was truly overwhelming. Then in October, I traveled to the beautiful city of Heidelberg, Germany, to participate in my first SAP TechEd virtual event. I got the opportunity. to present a developer keynote session together with my amazing colleagues, Shilpa, Rich and Ritali. It was also a fantastic experience to meet my colleagues from around the globe. I hope your 2024 was equally exciting and let us look forward for even more exciting activities in 2025. Till then, wish you all a Merry Christmas and Happy New Year.

[Michelle] 24 was such a great year as I got to do so many incredible things. and meet incredible people while doing it. I got to go to my childhood dream country of Australia, not just once, but twice, to present and meet all the folks attending the mastering SAP event in April and at the SAUGX conference after TechEd. Everyone there was so friendly and excited about SAP that I would gladly fly the 22 hours it takes to get there every opportunity. I was even able to turn one of those into a two-week vacation to explore beautiful Australia and I got to snorkel at the Great Barrier Reef, which was awesome. I also got to hang out with the amazingly talented and knowledgeable Devtoberfest 2023 winners at the ASUG Tech Connect event in Florida and at Disney World. It was all part of their reward for reaching Nirvana in Devtoberfest last year, and I'm grateful to be such a big part of it. It was so fun to be able to sit down and get to know these folks over a few days and chat all about SAP technologies. It was also fun to go on a roller coaster at Disney, which was not a work perk I ever expected to have. Finally, I being able to have. terrified of heights, was able to jump out of a plane because one of my insanely brave go -workers does it as a hobby. I got to ask him a million questions about it, including if they could push me out of the plane, which didn't end up being a problem because I had the tallest instructor as my tandem buddy, so my feet weren't even touching the plane when we got out.

[Ajay] This year, as an SAP developer advocate was wonderful for me, and these are just a few of the highlights. I got to travel the world, present, and meet wonderful members of our community. I know next year is going to have even more in -person events and I can't wait to meet everyone there and present on topics I'm so passionate about. Happy Holidays, Happy New Year, and as always, happy coding. Hello everyone, Season's greetings. As we approach the new year, let's reflect on the past year. I had the privilege of meeting many of our SAP developer community members during 10 in-person code jam sessions across Kolkata, Kohamvatur, Hyderabad and Bengaluru. I am very grateful to ask for CodeJam hosts for making this in-person event possible. We look forward to reaching more regions and developers next year. I had a person of meeting some of you at SAP Inside Track events where I also presented a session on SAP Cloud Application Programming Model. Later in September and October, we were focused on organizing SAP Devtoberfest event and virtual SAP TechEd. A big thank you to all our Devtoberfest presenters and participants for making it a resounding success. Many of you personally expressed your appreciation for the format and accessibility of Devtoberfest sessions. We hope to make it even better next year. Finally, I got to meet SAP community members and developers at SAUG-X TechEd on tour in Melbourne. It was pleasure to connect with so many of you at Developer Garage, hands-on sessions and mini stamp dish in Australia. Wishing you all, Merry Christmas and a very happy end to the year. and looking forward to seeing you soon next year.

[Kevin] We're in the last months of the year, which to me is always a beautiful time of quietness, learning and reflection. I'm trying to take the time to look back on the year. My son turned one and he learned to speak and I visited my dad in Grandmont, California. But there were a lot of great moments at work as well. For me, what stood out the most was Devtoberfest in Recap. Both events gave me the chance to connect and interact with our development community, the most and I also saw all my colleagues again. I had a great discussion with smart developers and even found some new friends. With SAP's AI portfolio growing rapidly, I've decided to create a brand new CodeJam covering the AI service development with CAP and SAP Charter to the AI Hub, which to me is not only interesting, but also gives you a great opportunity to learn this great new technology. I'm excited to see what the new year brings and I hope I'll see you on one of my co-jams. I wish you all so quiet times, time with family and friends, time to reflect and be mindful. See you all in 2025.

[Rich] Hey folks, Rich I'm in here and I have my best little boy, Sully, and my best little girl, Sage, here with me as well. And of course, my beautiful wife, Shauna behind the camera. Thanks, baby. I just wanted to take a couple minutes and reflect on 2024 and share some of the highlights. from the year. The developer advocates team had a really great year, and we really do appreciate your support, so thank you for that. Some highlights for me. We, of course, did the Code Jam Roadshow through Europe with Thomas, starting, or stopping through Romania, Germany, France, and Spain. It was a really great trip, and we had a chance to talk with so many of you face -to-face was really great. After that, my focus was really on tech-ed planning and supporting Devtoberfest, which was a really great. was an entire team effort. Our team worked closely with internal colleagues to build out a fantastic Devtoberfest agenda and the response from all of you was huge. So thank you for that. And of course, the whole team dropped into Heidelberg to host the TechEd virtual, which was awesome. I had so much fun with everyone involved. The developer keynote deconstructed was dialed in as usual. The Tech Ed on tour stops around the world. The last couple months of the year have been, I was a whirlwind. And I think a lot of us are a little relieved that it's over. So we're resting up and getting ready to do it all again next year, all for you, our developer community. So with that, I leave you with Happy Holidays, Happy New Year, and I'll see you in 2025.

[Daniel] I'm here in Kanandawa along the lake in upstate New York, where it's quite called, I must say. And I just want to look back at 2020. and say it was an amazing year. I got to be all over the world doing code jams at beating all kinds of interesting people and helping you learn SAP build. And I'm looking forward to an amazing 2025 with a dozen more code jams, tech cad, Devtoberfest, and more. And I want to wish all of you an amazing 2025 full of peace and happiness where all your dreams come true. And I finally want to especially thank my colleagues by fellow developers. Advocates who really, really helped me in all kinds of ways. And I want to wish them, I want to wish my fellow developer advocates, a wonderful 2025. We're full of success and excitement and I don't know what to say now. And in 2025, I want to wish all of my developer advocate colleagues who've done so much for me, an amazing year. And I hope we get to work together even. more.r. Take care.
