Podcast SAP Developer News – Transcription July 10th, 2025

[Intro] This is the SAP Developer News for July the 10th, 2025.

[DJ, AJAY NICO & VITALI] Hi there, and welcome from St. Leon Rote in Germany, just down the road from the mothership in Waldorf. We're here at Code Connect 2025. It's Wednesday. It's been an amazing week so far, starting with, on Monday, what, Ajay? hello, everyone. Welcome. And on Monday, we had two Code Jams running in parallel, one for cap and one for ui5 and we had jam-packed rooms and it was really exciting so to see all of you there and it was a very good weather as well over over to you nico thanks yeah so the day after on tuesday we had ui5 con and my personal highlight was meeting many of you the developers and talk tech and also my to-do list of things i want to try out is getting longer and longer the longer of the week gets there's just so much inspiration out here so that was very cool and what happened today dj what happened today that's wednesday was recap recap 2025 um i love this event i love code connect generally but specifically recap again just like nico meeting you folks but learning from you folks learning from everybody everybody from the sessions from the corridor conversations it's just humbling to see so many big brains and so many humble people so many modest people here at the event and we've got something special tomorrow as well as part of the code connect event what is it vitality so for the very first time code connect family is getting a new child which is HANA techcon and we are really looking for that because the idea came to us last year during the code connect and we really wanted to get hana into the family of all the other technologies at sap so probably you're looking this on friday and we are recording this on wednesday and the event is happening for hana tech con tomorrow so i don't know what would be the proper english phrase to welcome all of those who are looking on friday sorry watching on friday for the event that is going to happen tomorrow while we are recording on wednesday had it have ever happened have it happened yet a universal welcome how about that a universal wealth a universal welcome okay so that's us wrapping it up it's now time for the post recap celebrations downstairs so we're off now have a great evening great morning great afternoon bye for now cheers cheers bye fast forward to thursday and here i am at hana techcon. As we mentioned, it is the very first time we have it. I'm really glad there are many participants joining. There are many people watching this live. And as well, rest assured that we will provide recordings available for you as well. I would like to welcome as well our SAP community team here. If you didn't get a chance or if you haven't had a chance to visit that table here today and to collect all these beautiful stickers, make sure that you stop by one of our SAP CodeJam this year and you get them as well.

[DJ & Oler] Hi there, folks. So we're at Recap 2025, part of Code Connects, this week here in Saliar Road. And I'm very happy to have grabbed Ola for a short time. Ola Lilienthal, head of the CAP organization. And I'm going to ask Ola to talk to us a little bit about one of the topics in his opening taught this morning.welcome, first of all. Thank you so much, DJ, for having me. Well, thanks for being here. So, one of the topics which came hand-in-hand with the annual major release of Cap, which is Cap 9, Node.js 9, which was out in May this year, right, Reg? Also, at the same time, there's a new developer license, developer license 3.2 Cap, is that right? That's great. Can you tell us a little bit about that? Of course. Thanks for giving me the opportunity. Look, there have been a lot of customers and partners approaching us in the past and asking us specific questions about how they can use CAP and in which scenario. And actually, there was some ambiguity in that license and the old license and the developer license. And so we had two ways of handling it. one was we always get into discussions with legal to get explanations of how to interpret that license yes yeah and to then give answers to customers but you don't really want to be in that situation to interpret legal tech it doesn't help you to give your customers answers right so the second approach was let's get those ambiguities fixed let's work on that license so we got together was legal and we formulated some things differently in yet cup specific available license and the gist of it is basically that if you're using CAP as a developer for testing purposes for developing purposes for educational purposes research anything anything you can do that we are happy to for you to use CAP and try it out if you're making money with it if you're using it in a productive scenario we want you to do that or let the productive application run on an sap license but right yeah so today this is either sap BTP or also XSA and that's what we ask you. And in return, we make it really clear that if you do so, you get full support for that CAP application on that platform from us, as I say. That's great. I mean, that's a nice, clear direction. The door's not completely closed yet, right? So it's a journey. Yes. So we are still

discussing about the process of open sourcing CAP further. As you all might know, we had a lot of CAP components which we open sourced in the past. over the last years and so that journey is still kind of ongoing um but there are a lot of discussions um in how how far we go here if we also open source the core of cup um and that's still kind of an an open journey i would say yeah and you still continue on that journey um but it's not really decided exactly and in the meantime we have the capjs.org on github and that's you know the you know the nearest part of the journey okay well you heard it here first first folks so oler thanks very much for joining us thanks so much i think it's now time for a uh maybe a small beer maybe a small or beverage we're told beverage yes beverage of choice okay thanks oler thanks so much great

[Bentley & Anne] hey everybody it's Josh bentley i'm a community advocate and i'm with Anne who is also a community advocate and we're so happy to be reporting live from the beautiful SAP campus here in Waldorf, Germany. We're prepping for one of our favorite events, which is SAP TechEd. It's going to be on site in Berlin, November 4th through 6th. And we've got a couple of great things that are being promoted by our colleague, Cecilia Wergo, with some blog posts. Lots of information to talk about. And I'm going to let Anne tell you about one of the great things you can submit right now. What is it? We're bringing back the SAP Community Talks. Do you want to share or talk about anything you learned experiences cool demos you built technology you worked with this is your opportunity to submit a talk the submission date is july 14th it's coming up shortly so think fast it's a monday you have all weekend all weekend to work on your submission. Then on July 22nd, we will let everyone know the submission status, if it was accepted or declined. As part of the process, you'll be assigned a developer advocate who will help you through the process. Kind of like a buddy, just to help you get set up in the community theater, which will be on-site in our community clubhouse. Yes. And the developer advocate will reach out to you at the end of July. So we're going to have 20 of these available. These are talks of 20 minutes and what's really cool is you get what's called a lecture pass. So it's a free ticket to be on-site in Berlin. We do not cover travel and expense but you will be able to go onto the show floor as a speaker and attend everything happening at TechEd. The lecture pass does not entitle you to the hands-on workshops. Those you can actually increase your access by paying the difference in price between the free ticket and a full price pass. The other thing we have is another huge community favorite coming back on stage demo jam so lots of people are going to want to be on stage in demo jam showcasing all the great things they build with btp all the great code that they know about and that they can do things with btp the trick is you need to actually get a lot of team members together and submit a proposal that we can look at and see if it's going to be one of the ones we select and this process is happening now through the end of july july. once that's done we're going to go into a selection committee and then do some interviews and select different teams that we will then invite to be on stage the top six yes six will be on stage and you'll have six minutes and you will not be allowed to go over and we'll buzz you off stage and then after that we'll have our plaza meter and it will judge who the best one was and the winner of demo jam and you'll get the trophy if we can find it if we can find it yes exactly it's somewhere around here so that's it we've got demo jam tickets as well so the top teams that are selected those six teams will get to have two people on stage with the same lecture passes and remember no slides exactly no slides no ai generated content yes real thing real thing little people real community connecting yeah all right we will see you in Berlin. Bye. Bye.

[NICO & SIMON] Hi, everyone, and welcome to the SAP Devolver News. We're here at CodeConnect, and I happen to bump into Simon, who just last week published the CDS MCP plugin. So who's better to introduce it than Simon himself? Yeah, thank you. The CAP MCP plugin is basically a plugin that allows you to handle model context protocols for your OData service directly in CAP. It's PluginPlay. And yeah, check out the link and description. All right. Hope to talk to you soon. Bye.

[Rekha] Hello, everybody. Are you looking to step up your central point of entry user experience from SAP Build Work Zone Standard Edition, which was previously called SAP Fury Launchpad to SAP Build Work Zone Advanced Edition on SAP BTP? Then here is an in-depth structured guidance

to achieve the same. In this blog post written by our SAP Build Works on Product Manager Yumna Abbasi, you could understand the overview of SAP Build Works on Standard Edition and SAP Build Works on Advanced Edition. The key differences between these two offerings, information regarding the subscription and service plans, end-to-end transition path. Under transition, crucial steps like accessing the current implementation, planning the migration, exporting the content, setting up SAP billboards on advanced edition, content migration, how to use the existing configurations, best practices to follow during implementation, testing, validation, change management, and go live are well documented. Get ready to provide your business users a multimedia rich user experience with SAP Build WorkZone Advanced Edition. For more details, refer to the blog post. Link is provided in the description box. Thank you.

[Shila,Sheena & Shrini] It was a good mix of SAP customers and partners, making it a true community event. How was your experience, Sheena? It was great, Shilpa. And what I loved the most is that they follow our SAP developers YouTube channel and they like our content. That's so cool, right? And where are you heading next? So I'm heading to Kuala Lumpur first, where Shini will join me. And then we'll both fly together to Bangkok for the next set of code jams. Good luck. Thank you. We are in the SAP Thailand office in Bangkok, where we just finished SAP Gen AI Code Jam. Before coming here, we were in Kuala Lumpur, where we conducted the SAP Build Code Jam. So, Shirni, how did you feel about the SAP Code Jam Roadshow across Southeast Asia? This is the first time we are doing a Code Jam in this region. We've had many of our SAP developers from our customers and partners attend these events. It was exciting to hear their feedback and discuss the latest innovations happening in the BTP space, especially on SAP Gen AI topics. So, yeah, it was interesting, Code Jam. So, Sheena, what is happening next week? Yeah, the team is having a jam-packed schedule with Antonio traveling to India to join Ajay for the next set of integration suite Code Jam Roadshow across various locations in India. So, stay tuned for further updates.
