Podcast SAP Developer News – Transcription July 24th, 2025

[Intro] This is the SAP Developer News for July the 24th, 2025.

[Kevin] Hey, SAP community, I'm happy to announce this year's Devtoberfest event, which is happening September 29th to October 24th. And again, it's a packed event with great sessions, live streams, with your favorite developer advocates, amazing people from SAP and the community giving sessions at Devtoberfest. The only thing you got to do is head over to the SAP community, join the Devtoberfest group to be part of Devtoberfest and see the session catalog see all the information there is an announcement blog post as well with all the dates the tracks and everything which is happening and what you have to know about the grand prize and the competition also we have the fun activities back this year where my colleague daniel is preparing some cool stuff there for you to enjoy and then get entertained and the only thing you really got to do is head over to the community join the devtoberfest group and

[DJ] i see you there along with RAP UI5 and CAP are two of the poster children of today's generation of SAP development toolkits now binding see what i did there binding UI5 and CAP together is the venerable odata protocol one part of Odata that is a little bit orthogonal to the rest of Odata's design is the concept of actions and functions in bound and unbound playlists. Add that somewhat mysterious topic to the question of how best to make action and function calls from UI5, and you've got a really nice mystery conundrum to be resolved. Luckily, SAP community contributor extraordinaire marian size has exactly a blog post on this topic that is recently published it's called the complete guide to calling actions in UI5 with custom code and it covers all the subjects that i've mentioned and lots more moreover there's already some great discussion going on in the comments so head over to the blog post have a read of it learn from it and then in the comments maybe share your experiences and opinions. Happy reading.

[Witalij] hana express edition also available as a container image on the docker hub correcta mundo by the way did you know that you can use sap business application studio to work with the sap hana platform and access advanced including the express edition that and other topics like getting the most out of hacks cluster analysis with sql notebooks and calculation views and more were covered during hana .com recordings are now live go check them out speaking of which if you are curious why my co-presenter, Matthias, received a bottle of Polish wine from me, don't miss our session, Open Source Tools to Work with SAP HANA Multimodel Engines. Toward the end, I demoed long-chain integration with SAP HANA Cloud Knowledge Graph Engine using Python. Want to try this hands-on? The first SAP call jump on this topic, Foundations of AI Applications with SAP HANA Cloud, is happening in Portal this September and then in Kuwait in October. Interested in hosting such an event? Let me know. If you are into using Python in SAP Business Application Studio, check out my latest blog post. Link in the description.

[Rekha DR] Hello, everybody. Are you an enterprise automation expert or a business process owner working on enterprise automation? Here is the fantastic news. You can now import business process model and notation BPMN files into SAP Build Process Automation and convert them into executable business processes. SAP delivers enterprise automation with SAP Signavio and SAP Build Process Automation solutions. Using SAP Signavio Process Manager, you can model your business process and export the BPMN file. You could also use NetViewer BPM tool or any tool for that matter that supports process model creation and export as BPMN. Then import this file into SAP Build Process Automation to generate process extensions and automations. This follows a model to execute pattern and helps you migrate the processes easily to SAP Build Process Automation. If you want to understand how to carry out this task with a step-by-step guide with a business use case example, then do read through this excellent blog post by our enterprise automation expert, Rama Muradi. Link is provided in the description box. Keep learning and have a good time.
